

# Streamline workflows and improve patient care with ePrescribing

## DoseSpot benefits

- Reduce medication errors with automatic drug allergy and drug interaction checks
- Reduce the steps in your workflows with built-in automation
- Streamline operating costs with less in-house technology development and maintenance
- Improve patient care with smarter EMRs/EHRs
- Increase patient satisfaction scores with more efficient appointments

## Additional functionality with a click

Our ePrescribing APIs can be used to expand functionality within your current practice management system, including EMRs/EHRs. Here are the most common APIs activated by DoseSpot clients:

### New Rx

Route new prescriptions directly to patient's pharmacy, increasing convenience and efficiency.

### Rx Change Request

Pulls all information for Rx Change requests available by patient, clinic, clinician, or client.

### Rx Refills

Lists prescription renewal requests electronically by patient, clinic, clinician, or client.

### Add Self-Reported Medication

Medications can be added by NDC, free text or drug database, allowing DoseSpot to run more comprehensive interactions.

### Medication History

View aggregated medication history data from pharmacies and pharmacy benefit managers (PBMs) with patient consent.

### Drug Allergy Interactions

Returns results of drug-drug interactions and drug allergy interactions for the patient based on what is on record.

### Electronic Prior Authorization

Initializes the prior authorization request to be completed online or offline.

### IDP/TFA Activation

Allows system administrators to initialize clinicians to begin the required identity proofing process.

### Check Eligibility

Gives formulary information, copays, alternatives, restrictions, and RTF request status.

### Real-Time Prescription Benefit

Enables prescribers to select affordable, on-formulary medications covered by the patient's drug benefit.

### Print Prescription

Allows a coded prescription to print.

### Electronic Prescribing of Controlled Substances (EPCS)

Ensures all EPCS certifications and third-party audit documentation as required by the DEA are met prior to transmission.
