Dentsply Sirona

The restorative workflow step-by-step

Scanning

Primescan can quickly and accurately take a full-arch scan. The smart pixel sensor and intelligent processing scans 1.5 million 3D data points per second. You can interrupt and resume the scan procedure at any time. Additionally, you can assess the quality of the model right there on the screen. This procedure can be delegated, saving time and increasing staff engagement.

Using DS CORE™	A copy of the model data is automatically uploaded and added to your patient records as a .dxd file. You can access these files remotely using a web browser on your Primescan or any computer connected to the internet at any time.

Data transmission

Send the scan data via the Connect Case Center to any lab for easy and safe ordering with one click. Additionally, you can make use of DS Core™ to share case files with colleagues and to collaborate on treatment plans. You can also send all patient records from one platform in case of referring your patient to a specialist.

Using DS CORE™	Experience a new way of collaboration with peers or specialists within seamless integration of technology and complex restorative cases: Easily combine digital impressions, x-rays, patient videos or photos all from one library.*

Data reception by the lab of your choice

All third parties are able to access scan data transmitted via Connect Case Center by installing a Connect Case Center Inbox. You and your lab benefit from validated connections to all major lab CAD softwares. Your collaboration will become closer than ever before.

Treating the patient

With Primescan, you can serve a broad variety of restorative indications, giving your patients the treatment they deserve. Provide them with indirect restorations such as crowns, inlays, onlays and bridges, as well as implant restorations such as abutments and screw-retained crowns. Additionally, you can include esthetic treatment options like veneers and smile makeovers to your practice offer.

---

4 out of 5 Primescan clinicans agree that Primescan improves the quality of final restorations.**

"It's fast and it's accurate. It actually learns and reads your preparations and allows you to streamline your process."

Dr. Tricia Feist | Dentsply Sirona KOL
Santa Monica Bay Dental | Santa Monica Bay, CA
